EDUCATION

Bachelor of Science in Computer Engineering GPA: 3.69/4.00
University of Florida *August 2021 - December 2025*

- **President's Honor Roll:** Spring 2022 **Dean's List:** Spring 2022, Fall 2022, Spring 2023, Fall 2023, Spring 2025
- **Coursework:** AI, Bioinformatics, Data Science, DSA, Digital Logic, ML, NLP, OS, Signals & Systems

EXPERIENCE

JPMorgan Chase | React, TypeScript Tampa, FL
Software Engineer *February 2026 - Present*

- Working on a frontend project primarily in React Typescript.

Bank of New York Mellon | Agentic AI, Angular, TypeScript Jersey City, NJ
Software Engineering Intern *June - August 2025*

- Engineered Angular service using User Timing API to log 8+ components & 30+ API calls per login, providing visibility into bottlenecks contributing 6–10s load times.
- Integrated telemetry with FullStory & local storage (less than 1% overhead), enabling persistent, session-level performance data for AI-driven insights.
- Developed two RAG-enabled AI agents utilizing GPT-4 & LLaMA models to analyze multi-session datasets, identifying top latency sources and suggesting targeted optimizations.
- Presented toolkit and findings to 30+ engineers, influencing optimization strategy toward 5s perceived login times.

Kratos Defense & Security Solutions | Communication Protocols, Linux, MATLAB Fort Walton Beach, FL
Software Engineering Co-Op *May - August 2024*

- Boosted simulation launch speed by 5x–200x via Linux & Windows scripting.
- Utilized Linux shell scripts and Windows batch files to optimize simulations using SSH.
- Processed simulation data in MATLAB via TCP/UDP and configured RF receiver, demodulator, and bit synchronizer using serial UART.

Datamaxx Applied Technologies | C#, HTML, JavaScript Tallahassee, FL
Software and Quality Assurance Engineering Intern *May - August 2023*

- Developed 80%+ of the front end of a production package using Ajax, ASP.NET Razor, and jQuery.
- Collaborated with clients and vendor partners to integrate third-party products into the software package.
- Executed automated testing in Katalon and Groovy to find bugs and inconsistencies.

PROJECTS

Personal Website | GitHub Pages, React, Typescript *April 2024 - Present*

- Created a React portfolio website utilizing a modern frontend highlighting my values and skills.

Stable Diffusion Desktop App | C#, CUDA, FastAPI *February - December 2025*

- Developed a cross-platform desktop app for Stable Diffusion image generation with GPU acceleration reducing CPU utilization by up to 50% and memory by up to 80% from common web UI stable diffusion applications.

AI Cancer Hackathon Lung Cancer Metabolomics | Python, R, Supervised Machine Learning *October 2025*

- Won the 2025 UF Health Cancer Institute's Cancer AI Symposium hackathon, presenting findings on key metabolites for detection of lung cancer through the application of various supervised machine learning models.

SKILLS

- **Programming Languages:** Assembly, C, C++, C#, Java, JavaScript, MATLAB, Python, R, TypeScript, VHDL
- **Frameworks & Tools:** AI, Ajax, Angular, ASP.NET, AWS, CSS, Git, HTML, jQuery, JSON, Jupyter, Node.js, NumPy, Pandas, PyCharm, React, Sklearn, SSH, TensorFlow, VS Code, XML
